SAFETY DATA SHEET
Health & Safety Information

Section 1: Identification of the substance/mixture and of the company

1.1. Product identifier
Methanol

1.2. Product Code
31301

1.3. Relevant identified uses of the substance or mixture and uses advised against
Intended use
See Technical Data Sheet

1.4. Details of the supplier of the safety data sheet
Company name: Torco Race Fuels
2527 W Dallas Ave.
Apache Junction, AZ 85120

Telephone No.
(480) 288-9385

1.5. Emergency telephone number
(800) 424-9300 24 hr.

Section 2: Hazards Identification

2.1. Classification of the substance or mixture
Not Classified

2.2. Label elements
Using the Toxicity Date listed in section 11 & 12 the product is labeled as
follows: Not Classified

HMIS Health: 1  NFPA Health: 1
Fire: 3  Fire: 3
Physical Hazards: 0  Reactivity: 0
PPE: C  Special Hazards: ---

2.3 Other hazards
None

Section 3: Composition / Information on Ingredients

<table>

*The full texts of the phrases are shown in Section 16.*
4.1. Description of first aid measures: General
In all cases of doubt, or when systems persist, seek medical attention. Never give anything by mouth to an unconscious person.

Inhalation
Remove person to fresh air and keep comfortable for breathing. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

Skin
If on skin (or hair): take off immediately all contaminated clothing. Rinse skin with water/shower. If skin irritation occurs: get medical advice/attention.

Eye
Rinse cautiously with water for several minutes. If eye irritation persists: get medical advice/attention.

Ingestion
If swallowed: immediately call a poison center/doctor/physician. Do not induce vomiting. If ingestion has occurred within one hour, protect the airway and perform gastric lavage followed by the administration of activated charcoal. If greater than one hour since ingestion, protect the airway as needed and administer activated charcoal.

4.2. Most important symptoms and effects, both acute and delayed

<table>
<thead>
<tr>
<th>Exposure Route</th>
<th>Health Effects</th>
<th>Symptoms of Exposure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inhalation:</td>
<td>Effects on the Central Nervous system (CNS) may range from mild to severe effects such as respiratory depression.</td>
<td>From rapid breathing, fatigue, headache, light-headedness to more severe symptoms of dizziness and in extreme cases, respiratory arrest, convulsions or loss of consciousness.</td>
</tr>
<tr>
<td>Ingestion:</td>
<td>May be aspirated into lungs if swallowed, may result in pulmonary edema &amp; chemical pneumonitis.</td>
<td>Signs and symptoms of aspiration may include coughing, difficulty breathing, “gurgling” lung sounds when breathing, coughing up phlegm (sputum) that is yellow or green in color or bad smelling, change in voice (hoarseness), skin turning bluish due to lack of oxygen.</td>
</tr>
</tbody>
</table>

5.1. Extinguishing media
Small Fire: dry chemical, CO2, or fire-fighting foam. Large Fire: fire-fighting foam.

Fire-fighting foams which can be used are as follows:
- Fluor protein (FP) - Aspirated, Film-Forming Fluor protein (FFF) - Non aspirated or aspirated,
- Alcohol-Resistant FFFP - Non aspirated or aspirated, AFFF - Non-aspirated or aspirated, AR- AFFF - Non-aspirated or aspirated.

5.2. Special hazards arising from the substance or mixture
- The highly flammable vapors are heavier than air and may accumulate in low areas and/or spread along ground to distant ignition sources and flash back.
• Thermal decomposition produces acrid fumes.
• Vapor-air mixtures are explosive above the flash point.

5.3. Advice for fire fighters
• If tank, rail car or tank truck is involved in a fire, isolate for 800 meters (1/2 mile) in all directions; also consider initial evacuation for 800 meters (1/2 mile) in all directions.
• Move container from fire area if you can do it without risk.
• Apply cooling water to sides of containers that are exposed to flames until well after fire is out.
• Stay away from ends of tanks.
• Stay away from tanks engulfed in fire. Closed containers exposed to heat may explode. (OSHA Class 1B Flammable Liquid)
• Withdraw immediately in case of rising sound from venting safety device or any discoloration of tank due to fire.
• Cool fire-exposed containers with flooding quantities of water applied from as far a distance as possible.

Section 6: Accidental Release Measures

6.1. Personal precautions, protective equipment and emergency procedures
Precautions:
• This highly flammable liquid must be kept from sparks, open flame, hot surfaces, and all sources of ignition and heat. The highly flammable vapors are heavier than air and may accumulate in low areas and/or spread along ground to distant ignition sources and flash back.

Protective Equipment:
Gloves: Recommended: neoprene and nitrile.
Not recommended for heavy use: rubber, PVC, latex.
Respirator: NIOSH Approved and equipped with organic-vapor filter;
Eye: Safety glasses with side shields, safety goggles or face shields.
Clothing: Flame-retardant e.g. Nomex, Proban.

Emergency Procedures:
• Shut off leak/release source, if it can be done safely.
• Remove all sources of ignition.
• Isolate hazard area.
• Evacuate area of all unnecessary personnel.
• Keep unnecessary and unprotected personnel from entering.
• Emergency personnel must wear appropriate personal protective equipment.

6.2. Environmental precautions
Prevent entry into sewers and waterways. Report spills as required to appropriate authorities in accordance with all applicable regulations. Very toxic to aquatic organisms. May cause long-term adverse effects in the aquatic environment.

6.3. Methods and material for containment and cleaning up
• Use non-sparking tools and equipment.
• Use booms/pillows to prevent runoff into storm sewers and ditches that lead to waterways.
• Have foam or dry powder extinguisher on hand.
• Contain and recover liquid if it can be done safely: Collect spillage or absorb with an inert material (e.g., vermiculite, dry sand, earth), and place in metal container which can be grounded.
• Do not use combustible materials, such as sawdust, as absorbent.
• On large ground spills use firefighting foam to contain vapors. Recommended application rate is 0.1 USGPM/sq. ft. (4.1 L/Min / sq. ft.). This is the application rate for hydrocarbons as per NFPA 11.
• If a leak or spill has not ignited, water spray may be used to disperse the vapors, to protect personnel attempting to stop leak, and to flush spills away from exposures. Refer to Guide Emergency Response Guidebook (Transport Canada/US Dept. of Transportation).
7.1. Precautions For Safe Handling
Avoid skin and eye contact. Wash thoroughly after handling. Avoid breathing vapor. Use with adequate ventilation.

In Storage
Locations
- Store in a cool, dry, well-ventilated location, away from any area of fire-hazard.
- Outside or detached storage is preferred.
- Storage and use areas should be No Smoking areas.
- Ventilation system must be explosion-proof.

Containers
- Containers should be grounded.
- Drums must be equipped with self-closing valves, pressure vacuum bungs, and flame arresters.
- Containers of this material may be hazardous when empty since they retain product residues (vapors, liquid); observe all warnings and precautions listed for the product.
- Do not attempt to clean empty containers since residue is difficult to remove.
- Do not pressurize, cut, weld, braze, solder, drill, grind or expose such containers to heat, sparks, flame, static electricity or other sources of ignition: they may explode and cause injury or death.

7.2. Conditions for safe storage, including any incompatibilities
Separate from incompatibles like oxidizers, e.g. bromates, chlorates, chromates, hypochlorite’s, perchlorates, peroxides, nitrates, nitrites.

CAUTION!!! Do not use cutting or welding torches on drums, even when empty. Do not reuse container. Containers, even those that have been emptied, will retain product residue and vapors. Always obey hazard warnings and handle empty containers as if they were full.

7.3. Specific end use(s)
There are no exposure scenarios, see details in section 1.

Section 8: Exposure Controls / Personal Protection

8.1. Control parameters
The following occupational exposure limits have been established.

<table>
<thead>
<tr>
<th>CAS Number</th>
<th>Ingredient</th>
<th>Value Type</th>
<th>Control Parameters</th>
<th>Basis</th>
</tr>

<td>200 m, 325 mg/m3</td>
<td>NIOSH</td>
</tr>
</tbody>
</table>

DNEL/PNEC values
No Data Available

8.2. Exposure controls
No special requirements under ordinary conditions of use and with adequate ventilation.

Eye/face protection
Safety glasses with side shields, safety goggles or face shields.

Skin protection
Wear chemical resistant gloves. Nitrile gloves of minimum thickness 0.4 mm have an expected
breakthrough time of 120 minutes or less when in frequent contact with the product. Due to variable exposure conditions the user must consider that the practical use of a chemical-protective glove in practice may be much shorter than the permeation time above. Manufacturer’s directions for use, especially about the minimum thickness and the minimum breakthrough time, must be observed. This information does not replace suitability tests by the end user since glove protection varies depending on the conditions under which the product is used.

Other
Gloves, overalls, apron, boots, or other suitable protective garments should be worn to minimize contact based on the task being performed.

Respiratory protection
NIOSH-approved air-purifying respirator equipped with organic-vapor cartridges. NIOSH-approved SCBA with full face-piece if concentration is unknown.

Thermal hazards
No Data Available

Section 10: Stability & Reactivity

The data listed above are typical physical and chemical properties that do not constitute product specification.

10.1. Reactivity
No data available

10.2. Chemical stability
MMT is extremely photosensitive and decomposes rapidly when exposed to light. The half-life of MMT vapor in air is less than one minute when exposed to light. Photolytic action converts the organic compound to a mixture of non-hazardous manganese oxides and carbonates and organics derived from methylcyclopentadiene. MMT photolyses rapidly in water.

10.3. Possibility of hazardous reactions
May react with oxidizing agents.

10.4. Conditions to avoid
High temperature, sparks, open flames and exposure to light.

10.5. Incompatible materials
Keep away from strong oxidizing and reducing agents.

Section 11: Toxicological Information

Acute toxicity
The preparation has been assessed using the Acute Toxicity Data listed below, and classified for toxicological hazards accordingly. See section 2 for details.

<table>

Section 12: Ecological Information

12.1 Toxicity
Aquatic Ecotoxicity (Isooctane: CAS 540-84-1)
No data available

12.2. Persistence and degradability
There is no data available on the preparation itself.

12.3. Bioaccumulative potential
Not measured

12.4. Mobility in soil
No data available

12.5. Result of PBT and vPvB assessment
This product contains no PBT/vPvB chemicals.

12.6. Other adverse effects
**Section 13: Disposal Consideration**

13.1 Waste treatment methods
- Dispose of waste material at an approved (hazardous) waste treatment/disposal facility in accordance with applicable local, provincial, and federal regulations.
- Waste isooctane can be incinerated, fuels blending, or recycled

**Section 14: Transportation Information**

Do not dispose of waste with normal garbage or to sewer systems

14.1. UN number
- UN1230

14.2. UN proper shipping name
